

Nervous Coordination →  
Nervous coordination is brought about by means of nervous system, which is the quickest way of communication in the body of an animal by electro-chemical messages called nerve impulse.

HW

- 1) Write any two importance of Nervous System.
- 2) What is the difference between nervous coordination and chemical coordination?
- 3) Draw a labelled diagram of neuron.

Answer

- 1) The two importance of nervous system are  
• movement      • Balance and coordination

2) Nervous coordination → This is brought about by the nervous system. It consists of a brain, spinal cord, nerves and the end organ.

• Chemical coordination → This coordination is brought about through chemical messages called hormones

3 ⇒
