

Living things are different from non-living things in many ways.

Living things	Non-living things.
Living things have life.	● Non-living things have no life.
Living things need food.	● Non-living things do not need food.
Living things grow.	● Non-living things do not grow.
Living things breathe.	● Non-living things do not breathe.
Living things move.	● Non-living things can not move.
