

23.

From the above figure it is clear that

$$123^\circ + 85^\circ + 80^\circ + 5x^\circ + x^\circ = 360^\circ$$

$$\Rightarrow 288^\circ + 6x^\circ = 360^\circ$$

$$\Rightarrow 6x^\circ = 360^\circ - 288^\circ = 72^\circ$$

$$\Rightarrow x = \frac{72^\circ}{6} = 12^\circ$$

$$\begin{aligned} \text{Sol, } \angle AOB &= 5x^\circ \\ &= 5 \times 12^\circ \\ &= 60^\circ \end{aligned}$$

$$\begin{aligned} \angle BOC &= x^\circ \\ &= 12^\circ \end{aligned}$$

24. From the above figure it is clear that

$$2y^\circ + 2y^\circ + 2\frac{1}{2}y^\circ + 3\frac{1}{2}y^\circ = 360^\circ$$

$$\Rightarrow y^\circ \times (2 + 2 + 2\frac{1}{2} + 3\frac{1}{2}) = 360^\circ$$

$$\Rightarrow y^\circ \times (4 + 6) = 360^\circ$$

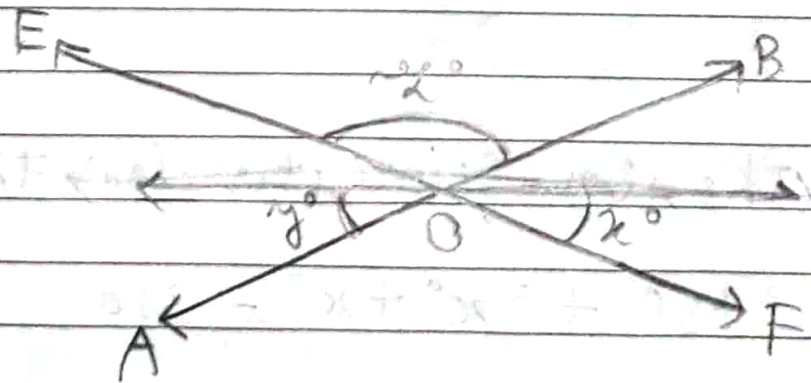

$$\Rightarrow y^\circ \times 10 = 360^\circ$$

$$\Rightarrow 10y^\circ = 360^\circ$$

$$\Rightarrow y^\circ = \frac{360^\circ}{10} = 36^\circ$$

Sol, the angles are $72^\circ, 72^\circ, 90^\circ, 126^\circ$.

25

(i) From the given figure it is clear that

$$\cancel{y^\circ} + \angle COE + 90^\circ = 180^\circ \text{ (as } \overleftrightarrow{AB} \text{ is a straight line)}$$

$$\Rightarrow 45^\circ + \angle COE + 90^\circ = 180^\circ$$

$$\Rightarrow \angle COE = 180^\circ - 135^\circ = 45^\circ$$

$\therefore x^\circ = 45^\circ$ (as $\angle COE$ and $\angle DOF$ are vertically opposite angles)

(ii) From the given figure it is clear that

$$\cancel{y^\circ} = 3a \quad x^\circ = 3a \quad y^\circ = 5x \quad \cancel{x^\circ} = 6x$$

As \overline{CD} and \overline{EF} are intersecting at 'o' so $\angle COE = \angle DOF$

$$\text{Given that } y^\circ + x^\circ + \cancel{x^\circ} = 180^\circ \text{ (As } \overline{AB} \text{ is a straight line)}$$

$$\Rightarrow 9x^\circ + x^\circ + 6x^\circ = 180^\circ$$

$$\Rightarrow 12x^\circ = 180^\circ$$

$$\Rightarrow 12 \times 3a^\circ = 180^\circ$$

$$\Rightarrow a^\circ = \frac{180^\circ}{36} = 5^\circ$$
