HW  
3/8/2021

1) Name the post fertilization events.

Ans- After fertilization the fertilised egg (zygote) soon starts developing and by the time it reaches the uterus, a small ball of numerous cells is already formed. The embryo forms a pit in the wall of the uterus and gets fixed in it. This natural way of fixing of the embryo in the wall of the uterus is called implantation.

2) Write any two functions of Placenta.

Ans- The two functions of Placenta:-

\* It provides a large surface area to pass from mother to embryos for glucose and oxygen.

\* It removes the waste that is produced in the growing foetus into the mother's blood.
