Home Assignment

1) Define glands.
Glands are the group of cells that is present in our body which releases certain chemicals.

2) What are the different types of glands. Write two differences between these glands.

Ans The different types of glands are Endocrine glands and Exocrine gland.
Difference :-

Endocrine Glands

* Endocrine Glands are ductless glands, their secretions are carried by blood to the target organs.

* Endocrine Glands secrete hormones.

Exocrine Glands

* Exocrine Glands have ducts, they send their secretions through ducts to the target organs.

Exocrine Glands secrete enzymes.
