HW

Q1. Pollination may occur in plants by various pollinators. The ^{aquatic} plants like water lily and lotus may pollinate through water. Some birds like humming birds may also help transfer of pollen grains from the male flower to female flowers.

Q2. Pollination is important for plants because:-
→ It helps in the transfer of gametes which is very much essential for fertilization.

Q3. Self pollination

* It's the process in which the pollen grains get transferred from one flower to the same flower or another flower of the same plant.

~~Agents~~ Agents may or may not be required.

Cross Pollination

It's the process in which pollen grains get transferred from ~~the~~ a flower to another flower of another plant, but belonging to the same species.

Agents are required for pollination

Agents of pollination: Wind, Water, Insects,
~~and~~ Birds
