

Why earth is living planet and why other planets are not. ?

Page No.

Date.

The earth is called living planet because

1. It is the home of different kinds of animals, plants, human beings and many other life forms.
2. The temperature on earth also supports life forms. The distance of earth from sun helps to balance range of temperature.
3. There are different types of life supporting gases like oxygen in earth's atmosphere.
4. Earth has plenty of water which helps life forms to live and grow.
