Paragraph Indian rivers

Date _____
Page _____

In India has many rivers, two types of river flow in India, These are perennial river and non-perennial river, As the rivers of the north India have their sources in the Himalays, These are alway water flowing because from Himalayas snow fed in summer season, The many and major rivers are originate from the Himalayas and fall into the Bay of Bengal. Ex - The Ganga, The Brahmaputra many more. Like that the rivers of the South India have their sources/originate in the mountains. So these are not perennial. These rivers depend on rainy water also, Ex - The Godavari, The Krishna etc. The rivers of India has a major role in the lives of people, including transport, water source, producing Hydro electricity, tourism, trading - and most help in agriculture. So in past many civilization of India raise in the sites of river bank.
