Paragraph Pollution

Date _____
Page _____

Pollution is a very serious problem today. Pollution is the process of making the Environment pollute by adding harmful substances. There are mainly four types of pollution these are air pollution, water pollution, soil or land pollution and noise pollution. Smoke from vehicles and industries and houses causes air pollution. Dumping waste garbage directly into water body and also ^{human} every thing throw in water results in water pollution. When we use many types of chemicals medicines use in our farming lands for fertile, it is also harmful and damage our naturally fertile land, it is causes Land / Soil pollution, The Sounds of loud speakers, motor horns, heavy machines create noise pollution. Pollution is dangerous cause many serious health problems like allergy, skin diseases, respiratory diseases, and jaundice, heart attack and hearing problem etc. Pollution is damaging our environment, so it is a global problem. It is the result of acid rain and global warming. It is always puts a negative effect on all living things. If we want to stop pollution by using eco friendly and renewable resources. Reuse, Reduce, Recycle are the best police to stop pollution.
