COMPUTER
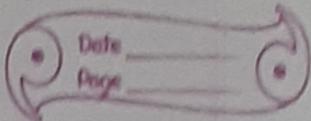

1) Autonumber datatype generate sequential number whenever record is added.

2) OLE object datatype used to embed an object created in another application

3) we can add image by using attachment feilds

4) Calculated datatype is used when a user creates a table feild that calculate values.

5) Access sets look up feilds to the number datatype.

6) The Star topology handles large no. of traffics.

7) In ring topology all the nodes in the network are connected in a circular manner.

8) In star topology, the central server act as a server.

9) In point-to-point topology two nodes are directly connected.

10) Network architecture is divided into two types.

11) Wi-Fi use radio signals

12) A network maintained without using wires are called wireless network.

13) LAN and MAN are the different types of networking

14) Network topology refers to the layout in which various components of network are connected and communicate with each other.

15) Network security means protecting data and resources from any authorised access

16) WAP (Wireless Access Point) is a device that connects wireless communication devices to form a wireless network.

17) Criteria property contains the condition in the basis of which the records will be filtered in the query output.

18) A form is a piece of paper on which a user fills the required information in specific fields.

19) A query is a database object that helps you to retrieve and view information from one ore more database tables.

20) In a query the criteria property is used to set the condition on the basis of which the records are filtered.

21) You can set multiple criteria in a query using single property.

22) Sort property is used to filter the data either in ascending ore descending order.

23) Database allows you to add and update data in a table one record at a time.

24) A pivot table is an effective way to organise and summarise data in a printed form.

25) There are 5 types of operators in python.

26)

26) The statement that governs the flow of a programme are called control statement.

27) The Datatype of a variable is an attribute that tells what kind of data cana variable have

28) Concatenation is string operatore

29) The constructores construct executes the statements into a sequential manner.

30) Interactive mode of python giving the output instantly.
