

Homework

1) Define Tissues

A group of cells that are similar in structure & / or work together to achieve a particular function forms a tissue.

2) Why animals & plants have different types of tissues?

- > Plants & animals are different kinds of organisms; hence, they require different types of tissues to carry out their bodily functions.
- > Plants are autotrophic & stationary, whereas animals have to move from one place to another in search of food, mate & shelter.

3) Draw a well labelled diagram of meristematic tissue.
