Information About the migratory Birds

Greater Flamingo :-

Greater Flamingo is the largest of all species of the Flamingo family, found in the India Subcontinent. This migratory bird is found in parts of Nal Sarovar Bird Sanctuary, Khijadiya Bird Sanctuary and Flamingo city. Greater Flamingo migrate to freshwater and estuarine habitats across Maharashtra, Andhra Pradesh, Telangana, Rajasthan and some other states.

Great White Pelican :-

The Great White Pelican also is known as rosey Pelican is a large bird with a long beak and a large throat pouch. This bird is found in Eastern Europe, Africa, and Northwest India. This species migrates to India during winter in large numbers and settle down mainly in the states of Assam, Uttar Pradesh, Rajasthan and Gujarat.

Bluethroat :-

Bluethroat is a small brightly coloured passerine bird from the Thrush Family and winters in North Africa and the Indian Subcontinent. Keoladeo National park of Bharatpur in Rajasthan is one of the best places to spot migratory birds coming to India during the winter season.

Siberian Crane :-

Siberian Crane are snowy white colour birds and migrate during winter to India. These cranes are omnivorous and breed in the Arctic Tundra of Russia and Siberia. These birds are critically endangered species of migratory birds, wintered in Bharatpur Keoladeo National park till 2002.

Asiatic - Sparrow - Hawk

Asiatic - Sparrow - Hawk is a bird of prey but smaller compared to the large birds of prey such as the Eagles. They found in forests and during the winter they make their way to India and

Myanmar. Sparrow Hawks migrate to India for a period of roughly 4 to 6 months.
