

Homework

(Q1)

Advantages

- * It is efficient in delivering Oxygen throughout an Organism.
- * It provides more power in the form of pressure!

Disadvantages

- * It's more complex than the Open Circulatory System
- * It requires more energy for blood distribution.

(Q2)

Ans: Humans have a digestive system which is capable of digesting both plant and animal products. But if we had fed exclusively on plant tissues throughout then our digestive system have been very similar to that of herbivores. Herbivores have teeth that are helpful specialized for eating plants. Because plant matter is often difficult to break. Most of the herbivores lack canines. Since food habit of herbivores ^{have} lack cellulose.

Q3

Ans: Body heat is increased with exercise because body is being active and our heart rate is increasing and the result is our body will sweat which is our way of cooling ourselves down. Shivering helps the body warm itself. When we shower, our muscles contract and relax in rapid succession, and all those little movements can create heat.

Q4

a) ~~the less~~ of True

b) True

c) False

d) False

e) False
