Oral questions

Choose the correct answer.

1. Cactus is a (desert) / aquatic / terrestrial plant
 2. In (marshy) / desert / hilly areas the soil is clayey and sticky.
 3. Duckweed and ~~under~~ water lettuce are underwater / Fixed / (floating plants).
- a) Roots of grass family helps to conserve soil. How?

Are Plants of the grass family have a fibrous root system and not a tap root system.

Fibrous roots spread through the soil

and help to hold the soil more firmly than top roots. This helps prevent washing away of soil and thus, helps in conserving soil.
