Earth's Interior Worksheet

Date _____
Page 30

1) The temperature will start increasing as we go close towards the centre of the Earth.

2) The pressure will keep increasing as you go on going down.

3) The three main layers of the Earth's interior are: -

- i) Crust
- ii) Mantle
- iii) Core

4) The crust is made of rock & minerals.

5) True

6) Two types of the Earth Crust are: -

- Continental Crust
- Oceanic Crust

- 7.) The rocks in the ocean crust are more dense than those on land.
- 8.) The upper mantle mainly consists of silica & magnesium (SIMA). The lower mantle mainly consists of the semi-molten material called ~~m~~ magma which come out in the form of lava in volcanic eruptions.
- 9.) The lithosphere is the outermost layer of the Earth. The lithosphere in the crust and upper ~~ps~~ mantle.
- 10.) Asthenosphere
- 11.) The mantle is 2900 km deep into the Earth.
- 12.) The two parts of the Earth's core are:-

- Outer Core
- Inner Core

13.) If the two metals that make up the core are nickel & iron, core is ~~const~~ considered as one layer because the ~~at~~ outer core is in liquid state and is ~~a~~ surrounding the inner core.
