

3 types of muscular Tissue

Skeletal $\frac{p}{s}$

Location = skeleton

Function = Movement, Posture

Appearance = striated, multinucleated, fibers
parallel

Control = Voluntary

Cardiac $\frac{p}{s}$

Location = heart

Function = pump blood continuously

Appearance = striated, one central, nucleus

Control = involuntary

Visceral :

Location = G.I. tract, uterus, eye, blood vessels

Function = Peristalsis, blood pressure, pupil size, erects hairs

Appearance = no striations, one central nucleus

Control = involuntary
