## DETERMINERS

Q1) One of the biggest problems facing the world today is global warming. Many scientists believe that our production of Carbon dioxide and other green house gases is having a heating effect on the atmosphere and this could be very dangerous for human life. We must examine the problem of global warming and suggest some ways of solving it.

Q2) What we call life is a very complex affair. It is not simply eating, reproducing and finally dying. Every creature is doing these. Man has to lead a highly complicated life. It is like going through a maze and coming out. He is an economic being and a social animal. He has to earn, make a home, look after his people and attend all his obligations to the society and the government. So, in order to be successful he has to develop certain qualities.

Q3) Before alighting, the Wild Pigeon, like the Carolina Parrot and a few other species of birds, breaks the force of its flight by repeated flapping, although apprehensive of receiving injury from coming too suddenly in contact, either with the branch, or the spot of ground on which ~~is~~ it intends to settle.

Q4) High school is a critical time in life of young people. On X one hand, teenagers are eager to enjoy their freedom and independence, while on the other hand, they must be disciplined enough to keep their priorities straight. In my opinion, the family, the peer group and the school impact high school students, the best at this vulnerable time.
