

SCISSOR - The blades of the scissors are a pair of wedges in a cross shape which pivot around a fulcrum. The ~~at~~ attached handles are levers.

Pulley - Pulleys are powerful simple machines. They can change the direction of a force which can make it much easier to move something.

ICE TONGS - The third class levers is the effort is in the middle of the system. The fulcrum for the tongs is where the two ends are attached the effort is in the middle ~~at~~ ~~the~~ and the load is the separated ends.
