1. The temperature increases as you travel closer towards the centre of the earth.
2. The atmospheric pressure increases as you travel towards the centre of the earth.
3. The 3 main layers are crust, mantle and core.
4. The earth's crust is made up of dirt, sand, stone, silica, aluminium, iron and magnesium.
5. True.
6. 7. As the pressure is more in the oceanic crust, thus it produces denser rocks than the ones on continental crust.
6. 8. The two types are oceanic crust and continental crust.
8. The mantle consists of silica, aluminium, iron and magnesium.
9. The crust makes up the Lithosphere.
10. That layer is known as lower mantle.
11. ~~The~~ mantle is 2900 km deep.
12. Outer core and inner core are the 2 parts of the core.
13. The two metals are Nickel and iron (NiFe).
