

ch-3

Force

Q. What is friction? What are the effects of friction?

Ans: The force which slows down the motion of a moving body ~~as well as~~ in contact with

the surface of another body, is ~~known as~~

called the ~~frictional~~ frictional force or the force of friction. The effects of friction

are: Friction opposes motion, friction always acts in a direction ~~of~~ opposite to the direction

of motion, friction produces heat and friction causes wear and tears.
