

March 2020

Monday 30

1) a) Filtration → The process of separating solid particles from liquid by allowing it to pass through a filter paper is called filtration

b) Sublimation → The process in which a solid changes directly into its vapours on heating is called sublimation.

c) Evaporation → It is the process of converting a liquid into its vapours state either by exposing it to air or by heating.

d) Crystallisation → Evaporation of liquid from a homogeneous liquid - solid mixtures and collecting solid in the form of crystals is called crystallisation.

Notes
