

assignment

Q 1 What is an ecosystem?

An Ecosystem is a dwelling place with the inhabitants living together and interacting with each other and also with their physical environment in some definite ways.

Q 2 How do ecosystem balances the nature?

Ecosystem allows survival of humans and animal and also maintain a balance between living things and resources they need to ~~survive~~ survive.

Q 3 Drawn in the next page →

Q 4 Trophic ~~Re~~ levels of a food chain goes on decreasing from bottom to top why?

At each trophic level of food chain energy is lost. Because of which, a typical energy pyramid has a large base of producers. Each level above gets smaller, because as energy is lost as heat, there is ~~lot of~~ less energy available as food for organisms.

Q - Draw the diagram of a terrestrial ecosystem.
