

Ques

1. The filtration units of kidneys are called
(d) Nephrons

2. What is the mode of nutrition in fungi & protozoans?

A. Saprophytic

3. Which of them contain less nitrogenous

Q. waste-renal vein or the renal artery?
A. Renal vein

3. ~~Differentiate between two part of meristem in xylem & phloem.~~

4. What is the role of glomerulus in kidney?

A. The function of glomerulus is to filter the blood passing through it & initiate urine formation.

What are the differences between the transport of materials in xylem & phloem?

- A
- Transport of material in xylem
 - Xylem tissue helps in transport of water & minerals
 - Transport in the xylem requires physical forces such as transpiration pull.

- Transportation of materials in phloem
- Phloem tissue helps in the transport of food.
 - Transport of food in both xylem & phloem requires energy in the form of ATP.
