

Answer the following questions:-

- 1:- Autonumber datatype generate sequential number whenever record is added.
- 2:- OLE Object datatype is used to embed an object created in another application.
- 3:- We can add images by using OLE fields.
- 4:- Calculated datatype is used when a user creates a table field that calculates values.
- 5:- Access sets lookup fields to the Design datatype.
- 6:- The Mesh topology ~~hang~~ handles large no. of traffic.
- 7:- In Ring topology all the nodes in the network are connected in a circular manner.
- 8:- In Star topology the central server act as Hub.
- 9:- In Point-to-Point topology two nodes are directly connected.
- 10:- Network architecture is divided into Two types.
- 11:- Wifi use Radiowave signal.
- 12:- A network maintained without using wires are called ^{wireless} Networking.
- 13:- LAN and WAN are different types of networking.

14:- Network Topology refers to the layout in which various components of the network are connected and communicate with each other.

15:- Network security means protecting data and resources from any unauthorized access.

16:- Wifi Router is a ~~the~~ device that connects wireless communication devices from a wireless network.

17:- Filter property contains the condition in the basis of which the records will be filtered in query output.

18:- Form is a piece of paper on which a user fills a required information in specific fields.

19:- View is a database object that helps you to retrieve and view information from one or more database object.

20:- In a query, the ~~ADD~~ ^{Criteria} ~~the~~ property is used to set the condition on the basis of which the records are filtered.

21:- You can set multiple criteria in query using ~~Sort~~ ^{or} property.

22:- Sort property is used to filter the data either in ascending or descending order.

23:- Forms allows you to add and update data in table, one record at a time.

24:- Report is an effective way to organize and summarizing data in a printed form.

25:- There are seven types of operators in python.

26:- The statement that governs the flow of a program is called Control statement.

27:- The Data type of a variable is an attribute that tells what kind of data can a variable have.

28:- Concatenation is String operator.

29:- The Sequential construct executes the statements in a sequential manner.

30:- Interactive mode of python giving output instantly.
