

H.C.O  
06/07/81.

1. Give 5 major differences between elements and compounds.

Ans →

### Elements

- They are made up of one kind of atoms.
- They cannot be broken down into simpler substances by any physical or chemical method.

### Compounds

- They are made up of 2 or more kinds of atoms.
- They can be broken down into simpler substances by chemical methods.

| <ul style="list-style-type: none"> <li>• They have their own set of properties.</li> <li>• It is represented by symbols.</li> <li>• Ex- Hydrogen (<math>H</math>), Gold (<math>Au</math>), Silver (<math>Ag</math>) etc.</li> </ul> | <ul style="list-style-type: none"> <li>• Properties of a compound differ from those of their elements.</li> <li>• It is represented by chemical formula which contains symbols of its elements.</li> <li>• Ex- Water (<math>H_2O</math>), Sodium chloride (<math>NaCl</math>) etc.</li> </ul> |
|---|---|

Q. Explain, why we say  $H_2O$  is a compound but  $H_2$  and  $O_2$  are elements?

Ans →  $H_2O$  is a compound as it contains 2 kinds of atoms i.e. Hydrogen and oxygen. But  $H_2$  and  $O_2$  are elements because they are only one atom.
