

Homework

1. Define glands.

= A gland is a group of cells or a "secreting organ" that secretes a chemical or chemical substance.

2. What are the different types of gland and write 2 differences between them.

= Exocrine
gland

Endocrine
gland

① A gland that makes substances such as sweat, tears, saliva - This gland secretes hormones directly into the blood.

② Exocrine glands have ducts present in them. Endocrine glands are ductless glands.
