HOME ASSIGNMENT

① Name the different types of neurons, and write their functions.

Ans → The 3 types of neurons & their functions -

* Sensory neurons -

⇒ These carry impulses from the sense organs to the spinal cord or brain.

* Motor neurons -

⇒ These carry impulses from the brain & spinal cord to the muscles & glands.

* Association neurons -

⇒ These transmit impulses from one neuron to another. They connect with one another via synapses where the axon terminal of one cell impinges on the dendrite/dendrite of another.

② Diagram of human brain & labelling of all the parts - Next Page.

③ Draw in detail the flow chart of human nervous system.
