Oral question

Choose the correct answer.

- 1) Cactus is a desert/aquatic/terrestrial plant ✓
- 2) In marshy / desert / hilly areas the soil is clayey.
- 3) Duckweed and water lettuce are underwater / fixed / floating plants.

Q1) The root of the plants of grass family help to conserve soil. How?

Ans) Plants of the grass family have a fibrous root system because the plants of grass family have a fibrous root system so fibrous roots spread through the soil and help to prevent washing away of soil and conserving soil.
