

HW

1. What is reproduction why it is important.
we're two differences between (is) between asexual and vegetative propagation?

Answers

1. All living organism produce individuals of their own kind for the survival of their species. This is called reproduction. If it is necessary so no, species will get extinct.

2. Asexual reproduction
Asexual reproduction produces plant identical to the parent plant.

Vegetative propagation
Vegetative propagation produces plant without seeds.
