1. The three major divisions of human nervous system are:-

- \* Central nervous system
- \* peripheral nervous system
- \* Subatomic nervous system

Q. Cerebrum is the largest portion of the brain. It is divided into two halves called cerebral hemisphere. Their outer surface is folded with ridges and groove. Each hemisphere is internally hollow. Their walls have an outer and an inner portion. The outer portion are called cell bodies contains bodies of neuron called grey matter.

The cerebrum is the seat of intelligence, consciousness and will power. It controls all the voluntary action.
