Short answer questions

3.

The three essential part of a cell are -

a)

Cell membrane - It is a thin, delicate flexible layer. Every cell has a cell membrane. It is present in both plant and animal cell. It is also selectively permeable.

b)

Cytoplasm - It is a semi-liquid, translucent and colourless substance. It is found between the nucleus and cell membrane.

c)

Nucleus - It is a small spherical mass located in the centre of cytoplasm. It regulates, coordinates different life processes of the cell, plays important role during cell division.
