Page _____

① Light is the medium which helps us to see object with the sensation to our eyes.

② Natural

Artificial

- The sources of light which have their own natural light and don't need any help to emit their light.

- The sources of light other than natural sources are artificial source of light.

- Ex- Sun, ^{star} firefly, ^{fire} etc.

- Ex- torch, lamp, artificial fire, etc.

③ Luminous

Non-luminous

- Objects which produce light of their own.

- Objects which don't produce light of their own.

- They can be seen by themselves.

- They need non-luminous to be seen.

- Ex- torch, lamp, fire, sun, star etc.

- Ex- book, table, fan, shelves etc.

- (4) A ray of light is a straight light going in a particular ~~light source~~ direction from a light source.
- (5) A number of rays coming from one source and spreading in all directions is called a beam of light.
