

Life cycle of a cockroach.

Life cycle of a cockroach

- There are three stages of a cockroach life cycle :-

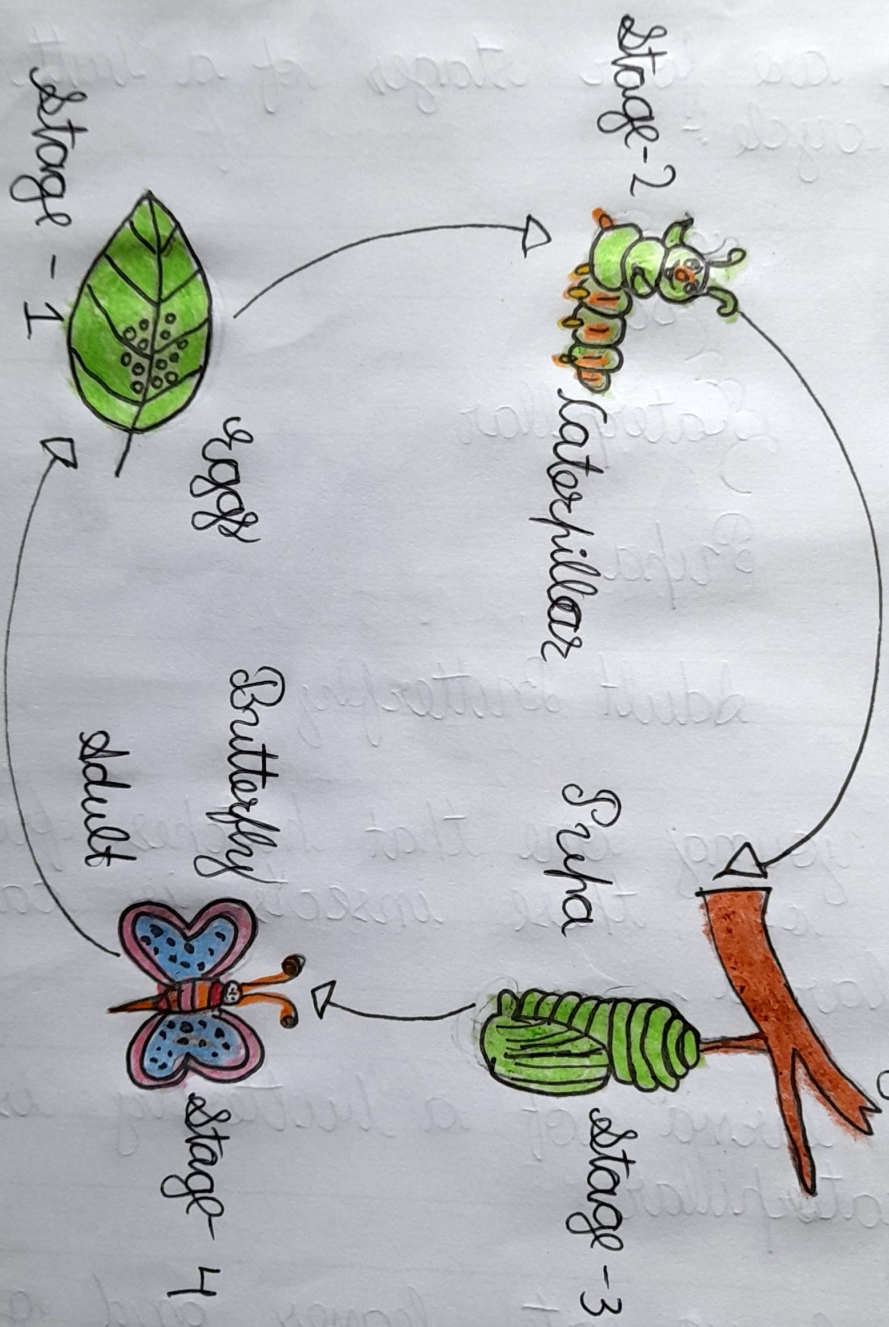

Egg

Nymph

Adult Cockroach

- The baby insect which comes out of the egg is called a nymph.
- It is very similar to the parent.
- After moulting many times, it changes into an adult.

Life cycle of a butterfly

Life cycle of a butterfly

- There are four stages of a butterfly life cycle :-

Egg

Caterpillar

Pupa

Adult Butterfly

- The young one that hatches from the egg of these insects is called a larva.

- The larva of a butterfly is called a caterpillar.

- The larva eats leaves and grows rapidly.

- After some time it stops eating and forms a covering called as a pupa around itself.
- Later the pupa bursts open and the butterfly comes out.
