

## Objective type questions

1) Fill in the blanks :

- (a) Experiments and observations are the two important basis of chemistry .
- (b) A porcelain dish is used evaporating .
- (c) Test-tube holder is used to hold the test tube while it is hot or getting hot .
- (d) Mortar and pestle is used for grinding and crushing solid substances into powder.
- (e) Glass apparatus is made of pyrex or borosil glass.

2) Match the following

column A

column B

- (a) Iron stand
- (b) Test-tube .
- (c) Beaker
- (d) Funnel
- (e) Glass rod
- To support apparatus
- To hold chemicals
- To keep solution
- To transfer liquid .
- To stir chemicals

3) choose the correct answer .

~~a) error~~

a) Evaporating dish is made of

(i) porcelain

(ii) glass

(iii) metal

(iv) plastic

(v) \_\_\_\_\_

b) Spirit lamp is made of

(i) glass

(ii) brass

(iii) steel

(iv) all the above

(v) \_\_\_\_\_

c) The apparatus to measure an accurate volume of liquid is

(i) beaker

(ii) conical flask

(iii) measuring cylinder

(iv) test tube

d) To pass gas from one vessel to another, you will use

(i) gas jar

(ii) delivery tube

(iii) glass rod

(iv) test tube

c) To prevent the escape of a gas from a gas jar, you will cover its mouth with.

- (i) watch glass
- (ii) cover glass
- (iii) beaker.
- (iv) round bottom flask

4) Write true or false.

- (a) A glass funnel is used to pour off liquids. True
- (b) A test tube is used to test liquid chemicals. False
- (c) A mortar and pestle is used for evaporation. False
- (d) A glass rod is used to stir solutions. True
- (e) A round-bottom flask is used to store chemicals. True
